

# Minimize placard's drag force

발 표 자 : 원광재, 최종혁

발표 장소 : H05-303

발표 계기 : 최적설계 프로젝트

발 표 일 : 2007. 10. 10(수)

# Contents

- 1. Project statement**
- 2. Data and information collection**
- 3. Identification of design variables**
- 4. Identification of a objective function**
- 5. Identification of constraints**
- 6. Future work**

# Project statement

## ❖ Problem of placard

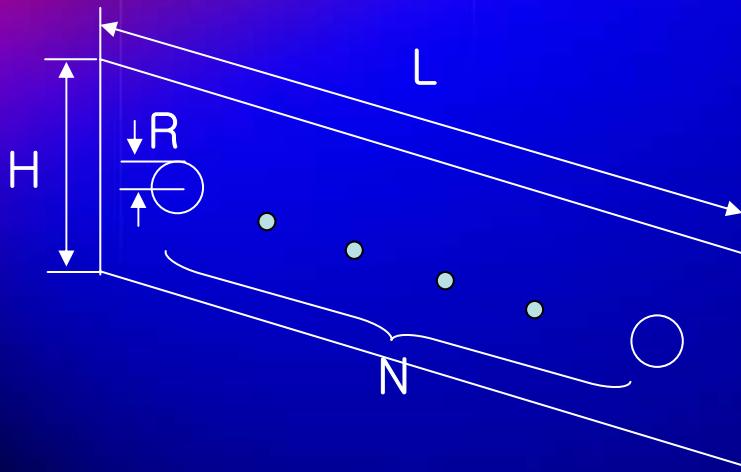

- ✓. Tare in Placard
- ✓. Wire snapped
- ✓. Column broken

*Minimize  
Drag force*

# Information collection and Identification of variable

## ❖ Data for project

	Data
L(m)	8
H(m)	0.6
V(m/s)	2.41

## ❖ Design variables

$x_1$  : Number of hole ( N )

$x_2$  : Radius ( R )

# Identification of a objective function

- ❖ Make a Objective Function

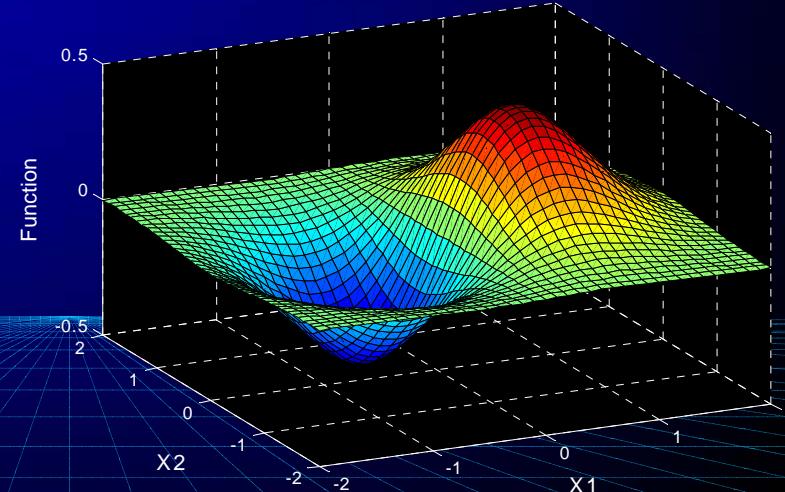

Calculate Drag force using Simulation

Create Drag force Function by Curve Fitting

- ❖ Minimize  $f(x_1, x_2)$

Graphical method

Numerical method

# Identification of constraints

- ❖ Area of Holes less than 5% placard's Area

$$\text{Constraint. 1} \quad A_h \leq 0.05 \times A_p$$

$$A_h = x_1 \times \pi x_2^2, \quad A_p = L \times H$$

- ❖ Length of between holes more than 1.5 times radius

$$\text{Constraint. 2} \quad 2x_2(5x_1 + 3) \leq L$$

$$x_1 \times 2x_2 + (x_1 + 1) \times 3x_2 \leq L$$

$$\text{Constraint. 3} \quad 0 \leq x_1(\text{int}) \leq 30, \quad 0 \leq x_2 \leq 0.1$$

# Future work

- ❖ Certification CFD result
- ❖ Geometry generate and simulation
- ❖ Make a objective function
- ❖ Find optimum solution
